

02 — UX Flow & Screen Specification

Design this as a polished, calm health app. Pinterest images in /UI are visual references only.

Design Direction

- Use the supplied /UI reference images for visual inspiration, not copying exact layouts or assets.
- Prefer modern, warm, trustworthy, feminine-but-not-childish UI. Avoid the generic blue/white AI-dashboard look.
- Use clear cards, soft surfaces, strong typography, generous spacing and accessible contrast.
- Every screen must work well on common Android phones and adapt to different sizes.

Navigation

- Bottom navigation: Home, Calendar, Insights, Learn, Settings.
- Mode switcher or contextual Home state: Cycle / Trying / Pregnancy.
- Use a simple floating or prominent action for Add period / Log symptom / Add appointment depending on mode.

Onboarding Flow

- Welcome → privacy explanation → name/optional profile → last period date → usual cycle length → period duration → goal selection.
- Goal options: Track cycle, Try to conceive, Already pregnant.
- Do not ask for unnecessary personal information.

Home Screen

- Show current cycle day or pregnancy week prominently.
- Show the most relevant next event: expected period, estimated fertile window, pregnancy milestone or appointment.
- Show a compact calendar/status card.
- Show quick actions: Log period, Log symptom, Add note, Pregnancy test, Appointment.
- Never display explicit sexual data in lock-screen notifications unless the user enables it.

Calendar Screen

- Month calendar with distinct states: period days, estimated fertile window, estimated ovulation day, pregnancy milestones.
- Legend must explain colors/icons.
- Calendar predictions should be visually different from user-confirmed observations.

Trying-to-Conceive Screens

- Fertility overview: estimated fertile window + uncertainty notice.
- Optional intimacy log. Keep it private and hide by default from shared accounts.
- Optional ovulation test result: negative / positive / not tested.
- Pregnancy test reminder after the user-defined interval.
- Education cards should explain that calendar predictions are estimates.

Pregnancy Screens

- Pregnancy dashboard: week + days, estimated due date, trimester, next appointment.
- Weekly card: educational fetal-development content and common changes, with clear medical disclaimer.
- Symptoms journal.
- Appointments and reminders.
- Emergency/urgent-help information screen with location-aware emergency guidance added later.

Couple Sharing

- Invite partner by secure code/link.
- Owner controls what is shared.
- Default sharing should be minimal. Do not share symptoms, notes or intimate logs automatically.
- Partner can receive general reminders and shared pregnancy milestones.

Source note

- Medical content in this document is product guidance, not a diagnosis or treatment protocol. Key fertility guidance references: American Society for Reproductive Medicine (ASRM), Optimizing Natural Fertility (2022), and ASRM Definition of Infertility (2023). Pregnancy urgent-symptom concepts should be aligned with current local clinical guidance.
